Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-29 are drawn to an apparatus, classified in class 211, subclass 074.
- II. Claims 34-39 are drawn to a method to install an organizing system, classified in class 312, subclass 334.41.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group II, as claimed, and Group I, as claimed, are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be practiced by another different process, i.e., a process of which utilizing adhesive tape for mounting the organizing system and it does not require the drilling of a pilot hole to mount the organizing system.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Should applicant elect Group I of the invention, then applicant is required to further elect between the following patentably distinct claimed inventions:

- III. Claims 1-29 are drawn to an organizing system, classified in class 211, subclass 074.

IV. Claims 30-33 are drawn to a consumer kit for organizing system, classified in class 312, subclass 334.23.

Inventions Group IV and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination of a vertical thin holding means that has a plurality of apertures as claimed. Further, the subcombination has a separate utility by itself that different from the combination because the subcombination does not require one set of spacers, a compact disc program, and the set of instructions.

Because these inventions are distinct for the reasons given above and the
search required for Group IV is not required for Group III, restriction for examination purposes as indicated is proper.

A telephone call was made to Mr. Erlick Benjamin on September 16, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khoa Tran whose telephone number is (703) 306-3437.
